DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Jacques L. Etkowicz on 10/06/2009.

The application has been amended as follows:

In claim 9, line 1

--non-transitory—has been added before “computer-readable”

In claim 21, line 1

--non-transitory—has been added before “computer-readable”

Reasons for Allowance

Claims 1-6, 8-9, 11-13, 15, 17-21, and 23 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to an AutoREC signal multiplex apparatus.

The following is a statement of reasons for the indication of allowable subject matter: The independent claims 1, 8, 11, 20, and 23 are identifies the uniquely distinct feature for "said recording mark has a value which changes alternately for every frame

so that AutoREC signal detection means detects, when recorded said recorded video signal is reproduced, an indication that reproduction of said recorded video signal is stopped”

David et al., US 2002/0131764 discloses a signal processing system comprises a recorder (500, 204) for recording information signals representing video audio and/or data material on a tape (502, 126). The recorder (500, 204) generates (152, 178) first material identifiers for identifying respective pieces of material on the medium such that each piece is differentiated from other pieces on the medium, and generates second, universally unique, identifiers for pieces of material, the second identifiers being associated with the first identifiers. The recorder (468, 472, 470 FIG. 31) records the material on successive slant tracks. A slant track stores a video timecode. At least one linear track stores a linear track timecode. The timecodes each have a plurality of user-definable bits. The material identifiers (464) are stored in the user-definable bits of the slant track timecode and in the user-definable bits of the linear track timecode. The identifiers associate the material with metadata objects. The metadata objects are repeatedly recorded (FIG. 33, 2) on the tape. The metadata objects are recorded a number of times corresponding to the relative importance of the metadata objects.

Murata et al., US 7,260,306 discloses a method, apparatus and computer program for editing recorded information having a format where both a video signal and an audio signal are recorded on a recording medium. When the recorded information is reproduced, a detection is conducted to determine a position where a predetermined

Art Unit: 2621

condition is produced in the audio signal. Discriminating information indicative of an editing position is produced based on the position where the predetermined condition is detected and displayed on a screen of a display apparatus.

None of the prior art, either singularly or in combination, fails to anticipate or render the above underlined limitations obvious. Claims 2-6, 9, 12-13, 15, 17-19, 21 are dependent on claims 1, 8, 11, 20, and 23 and therefore dependent claims also allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NIGAR CHOWDHURY whose telephone number is (571)272-8890. The examiner can normally be reached on 9-5.
